1 [ASK is transportable in half a dozen ways](#)

Bozena H. Thompson, Frederick B. Thompson

 April 1985 **ACM Transactions on Information Systems (TOIS)**, Volume 3 Issue 2

Publisher: ACM Press

Full text available: pdf(1.30 MB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

This paper is a discussion of the technical issues and solutions encountered in making the ASK System transportable. A natural language system can be "transportable" in a number of ways. Although transportability to a new domain is most prominent, other ways are also important if the system is to have viability in the commercial marketplace. On the one hand, transporting a system to a new domain may start with the system prior to adding any domain of knowledge and ext ...

Keywords: computer science academic programs, computer science bibliographies, computer science courses, computer science curriculum, computer science education, computer science graduate programs, computer science undergraduate programs

3 [Efficient \(stack\) algorithms for analysis of write-back and sector memories](#)

James G. Thompson, Alan Jay Smith

 January 1989 **ACM Transactions on Computer Systems (TOCS)**, Volume 7 Issue 1

Publisher: ACM Press

Full text available: pdf(2.93 MB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

For the class of replacement algorithms known as stack algorithms, existing analysis techniques permit the computation of memory miss ratios for all memory sizes simultaneously in one pass over a memory reference string. We extend the class of computations possible by this methodology in two ways. First, we show how to compute the effects of copy-backs in write-back caches. The key observation here is that a given
